PAT. PEND

Model
UP-3

*A new innovative tool for holing polythelene
irrigation piping for drips and sprinklers*

*A tool suitable for home gardeners, garden
owners, gardening contractors and agriculturists.*

AL-MAGOR

Metal & Plastic Works Ltd.

Advantages:

Comfortable Operation:
The tool is designed for comfortable and effortless operation.

Time Saving:
The spiral penetration of the blade into the pipe facilitates the operation, thus thousands of holes can be punched in a short time, and the waste plastic does not fall into the pipe.

Suitable for a range of pipe sizes:
By turning the button at the base of the tool, the size of the pipe can be adjusted between 12mm to 32 mm.

Strong and Reliable:
The tool is manufactured from high quality plastic materials and the blade is made of hardened and sharpened steel.

Operation Safety:
The blade is well protected from all sides to prevent accidents, and there is no danger of cutting through to the other side of the pipe.

Economical:
There is no need to buy a separate tool for each size hole required. The blade is interchangeable and comes in sizes 2mm, 3mm and 4 mm.

Care and Maintenance:

A drop of oil — preferably silicone oil - on the blade and spring, as well as cleaning off dirt occasionally, ensures easy smooth operation.

Extra Uses:

Model UP-2.5

A special model for holing blind integral driplines, where the depth of the blades' penetration ensures no damage to the integral pipe body.

Model UP-N

A special model that carries an insertion pin instead of a cutting blade for inserting connector components, especially suited for work with hanging pipe-lines in greenhouses.

Suitable for holing hanging pipe-lines in greenhouses. **Model UP-3**
